Ebook 1 of 5 | Infor LN 10.7 Multisite Series
Published: April 2026

Table of Contents

1. Chapter 1: Introduction to Multisite in Infor LN

What Is Multisite?
Why Multisite Matters
Key Terminology
When to Use vs Not Use Multisite
Summary & Practice Exercise

2. Chapter 2: The Enterprise Model

Company Structure: Logistic vs Financial
Hierarchical Data Architecture
How Data Cascades Through the Hierarchy
Summary & Practice Exercise

3. Chapter 3: Multisite Concepts Activation Workbench

The tcemm4600m000 Workbench
Activation Statuses and Workflow
Complete List of Multisite Concepts
Dependency Map & Activation Sequence
Step-by-Step Activation Flow
Summary, Lessons Learned, Practice Exercise

4. Chapter 4: Activating the Sites Concept

Prerequisites & Step-by-Step Flow
Key Session: tcemm0150m000
Post-Activation Verification
Summary & Best Practices

5. Chapter 5: Data Levels in a Multisite Environment

Global & Site-Level Data
Warehouse/Department Data
Use Global vs Site-Specific
Data Inheritance Rules

6. Chapter 6: Item Data in Multisite Environments

Global Item Master Data
Items by Site (tcibd1550m000)
Item-Ordering by Site (tcibd1560m000)
Item-Costing by EU (ticpr0107m000)

7. Chapter 7: Migration and Site Activation for Existing Companies

When You Need Site Activation
Planning the Migration
Pre-Migration Checklist
Post-Migration Validation

8. Chapter 8: Configuration Flows and Process Walkthrough

PREVIEW FullOnBaan

End-to-End Multisite Setup Flow
Decision Tree for Choices
Sample 3-Site Configuration

9. Chapter 9: Best Practices and Common Pitfalls

Implementation Best Practices
Common Mistakes & Solutions
Real-World Lessons
Performance Considerations

10. Chapter 10: Session Reference Guide

Enterprise Management Sessions
Item Master Sessions
Planning Sessions
Costing Sessions
Warehouse/Inventory Sessions
Purchasing & Production Sessions

Chapter 1: Multisite Operations & Implementation

Section 1: Key Topic 1

Infor LN 10.7 Multisite provides comprehensive functionality for managing multiple operational locations within a single enterprise. The hierarchical structure ensures proper separation of logistic and financial flows. Sites represent operational locations while Enterprise Units handle financial consolidation. Understanding this separation is critical for successful implementation. The Use Global checkbox controls data inheritance, allowing sites to either inherit global settings or override with site-specific values. This flexibility enables organizations to balance standardization with local requirements. Planning clusters group sites for unified demand planning, optimizing inventory across the entire network. Supply source determines how items are fulfilled at each location.

PREVIEW FullOnBaan

Item	Global Setting	Site Override	Impact
Lead Time	14 days	7 days (DC)	Faster replenishment at DC
Supplier	ABC Corp	Regional Supplier	Local sourcing advantage
Safety Stock	100 units	50 units (DC)	Lower carrying cost
MTS/MTO	Make-to-Stock	Make-to-Order	Custom vs standard production
Warehouse	Primary	Receiving WH	Location-specific defaults

Best Practice: Document your Use Global strategy before implementation. Consistency across all item-by-site records prevents planning anomalies.
