Technical Reference Guide

Infor ION · Architecture, Configuration & Administration

ION Desk | ION Connect | Workflows | Event Management | Pulse | Connectors | BODs

Table of Contents

Chapter 1 Introduction to Infor ION
1.1 What is Infor ION?
1.2 ION Architecture Overview
1.3 Key Components
1.4 ION in the Infor Ecosystem

Chapter 2 ION Desk
2.1 ION Desk Overview
2.2 Navigating ION Desk
2.3 Health Monitoring
2.4 Message Monitoring

Chapter 3 ION Connect
3.1 Document Flow
3.2 Connection Points
3.3 Data Transformation

Chapter 4 Workflow
4.1 Workflow Concepts
4.2 Designing Workflows
4.3 Approval Flow
4.4 Workflow Monitoring

Chapter 5 Event Management
5.1 Monitors & Conditions
5.2 Alert Configuration
5.3 Real-World Use Cases

Chapter 6 Pulse
6.1 Alerts in Pulse
6.2 Tasks in Pulse
6.3 Notifications

Chapter 7 Connectors
7.1 Infor Connectors
7.2 3rd Party Connectors
7.3 Business Connectors

Chapter 8 Custom BOD for Transformation
8.1 Business Object Documents
8.2 BOD Noun & Verb Structure
8.3 Mapping & Transformation

PREVIEW

CHAPTER 1

Introduction to Infor ION

1.1 What is Infor ION?

Infor ION (Integration & Orchestration Network) is Infor's enterprise-grade middleware and integration platform. It provides a unified framework for connecting Infor applications with each other and with third-party systems using industry-standard Business Object Documents (BODs) and XML-based messaging.

ION sits at the heart of the Infor CloudSuite architecture, enabling event-driven integrations, automated workflows, real-time monitoring, and multi-enterprise connectivity without requiring custom point-to-point interfaces.

High-Level ION Integration Flow

1.2 ION Architecture Overview

The ION platform is structured in clearly defined layers, each responsible for a distinct capability. Understanding this layered architecture is fundamental before working with any ION component.
