Table of Contents

01 **Architecture & Core Concepts**

Software architecture, system tiers, session components, startup flows

Q1–Q10 · 10 Questions · Easy / Mid / Hard

02 **Data Dictionary & Domains**

APDD, RTDD, Convert to Runtime, data types, validations, format masks

Q11–Q18 · 8 Questions · Mid / Hard

03 **Tables & Database**

Table lifecycle, referential integrity, reference mode, I/O events

Q19–Q26 · 8 Questions · Mid / Hard

04 **Sessions & 4GL Programming**

Declaration, before.program, form/group/choice/field sections, zoom

Q27–Q36 · 10 Questions · Easy / Mid / Hard

05 **3GL vs 4GL & Dev Objects**

Event-oriented vs procedural, run objects, packages, VRC, migration

Q37–Q44 · 8 Questions · Easy / Mid / Hard

06 **Functions, Libraries & DLLs**

Compilation, memory sharing, performance, when to use each

Q45–Q50 · 6 Questions · Easy / Mid / Hard

07 **Reports, Dump & Exchange Scheme**

Report types, 7-band structure, aggregates, data migration

Q51–Q56 · 6 Questions · Easy / Mid / Hard

08 **Debugging, Best Practices & Scenarios**

Troubleshooting, scenario questions, common mistakes, patterns

Q57–Q68 · 12 Questions · Mid / Hard / Expert

SECTION 01

Architecture & Core Concepts

Software architecture, system tiers, session components & startup flows

Q1 What are the five components of an Infor LN session? Easy

ANSWER

Every Infor LN session is composed of five key components:

- **OBJ (Object)** — Contains the core business logic. Controls all tasks performed by the session and can access DLLs for shared functions.
- **FRM (Form)** — The User Interface layer. Presents data to users, defines field labels, and manages Overview (grid) and Details (single-row) windows.
- **TBL (Table)** — Defines the data structure. Tables contain fields with data types, and fields can reference related tables.
- **RPT (Report)** — Prints or displays database information. Initiated via a print session or the printer icon in the toolbar.
- **CHT (Chart)** — Presents data graphically for visual analysis. Supports bar, line, pie and other chart types.

> PRO TIP
> Remember the acronym **OFTRC** — Object, Form, Table, Report, Chart. Interviewers commonly ask: which component holds business logic (OBJ) vs which is the UI layer (FRM).

Q2 Explain the difference between Software Architecture and System Architecture. Easy

ANSWER

Software Architecture defines *how a session starts* — the software components (Object, Form, Table, Report, Chart) and how they interact when a user opens a session.

System Architecture defines *how the system starts* — the technical infrastructure: the three-tier model of Presentation (UI), Business Logic (bshell), and Data Management (Database).

Software Architecture = application-level design. System Architecture = infrastructure and deployment topology.

Q3 Describe the three-tier architecture of Infor LN. Mid

ANSWER

Tier 1 — Presentation Logic (UI): Handles all user interface interactions: window placement, form painting, mouse control. Runs as *Worktop* (installed PC client) or *Webtop* (browser-based, no client install needed).

Tier 2 — Business Logic (Application): The *bshell* virtual machine processor — conceptually similar to a Java
