Table of Contents

Chapter 1: Introduction to Financial Integration 4

Chapter 2: Integration Architecture Deep Dive 9

Chapter 3: Prerequisites & Initial Setup 13

Chapter 4: Integration Document Types 17

Chapter 5: Mapping Scheme Configuration 22

Chapter 6: Element Groups & Mapping Elements 27

Chapter 7: GL Codes Configuration 32

Chapter 8: Mapping Compression & Document Numbering 36

Chapter 9: Integration Transaction Processing 40

Chapter 10: Purchase Cycle Integration 45

Chapter 11: Sales Cycle Integration 50

Chapter 12: Other Integration Cycles 55

Chapter 13: Reconciliation Framework 59

Chapter 14: Reconciliation Process & Analysis 64

Chapter 15: Remapping & Error Correction 68

Chapter 16: Best Practices 72

Chapter 17: Common Mistakes & Lessons Learned 76

Chapter 18: Practice Exercises 81

Chapter 19: Quick Reference & Glossary 87

Chapter 20: Advanced Topics 91

CHAPTER 1

Introduction to Financial Integration

Overview, Bridge Between Logistics and Finance

Financial integration in Infor LN 10.5 is the automatic mechanism by which logistic transactions (purchases, sales, inventory movements, manufacturing) generate financial postings in the General Ledger. This is one of the most powerful features of Infor LN, as it eliminates manual data entry and ensures complete audit trails for all financial transactions. Organizations implementing Infor LN without financial integration lose a key competitive advantage and incur significant manual effort in accounting operations.

INFORMATION

Financial integration is the bridge between logistics and finance. When a logistic transaction occurs (e.g., purchase order receipt), the system automatically creates an integration transaction that posts to the General Ledger. The mapping scheme determines which ledger accounts and dimensions receive the postings.

1.1 What is Financial Integration

Financial integration refers to the automated posting of financial transactions to the General Ledger based on logistic events. Unlike manual journal entries, integration transactions are generated automatically by the system when logistic transactions are processed. The mapping scheme controls where these transactions are posted.

- Automatic: Generated by system when logistic transactions occur
- Comprehensive: Captures all financial impacts of logistics operations
- Auditable: Complete transaction trail from logistic event to GL posting
- Configurable: Mapping scheme determines account and dimension assignments
- Reversible: Corrections made through reconciliation, not manual entries
- Dimension-aware: Postings include all required dimension values

1.2 Why Integration Matters

In traditional ERP systems without financial integration, finance staff must manually create journal entries to record the financial impact of logistics events. This approach is error-prone and time-consuming. Infor LN's integrated architecture eliminates this manual effort and provides real-time financial visibility.

Business Value of Integration:
